## Carton Flow Gravity Flow Pallet Racking

Gravity pallet flow racking is designed as a system with space saving & structure compact to utilize maximum 'Storage Cube'. Two pathways are designed for loading & picking ends. Pallets flow from one end to another end by gravity force on metal rollers. Hence by default, this system operates on FIFO (First In First Out). This system is designed to store pallets of multiple high and multiple deep. Each level shall be dedicated to one type of SKU only. The racking system is the most economic & efficient storage style for storing items. It is suitable for batch production / storing homogeneous products and expiry date for SKU is critical. This racking has pallet loading on one end and unloading on the other end.
